DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims 1-25 are drawn to a programmable finite state machine configured to transition to one of a plurality of next state comprising a first memory storing transition rules in a ranking order of generality, and configured to receive a (k+m)-bit word of input symbol and the current state..., etc., and a logic block configured to select a most specific transition rule from among the one or more matching transition rules, and a second memory configured to receive the selected transition rule...etc.;

Group 2, claims 26-31 are drawn to a method of generating state transition rules comprising the steps of "forming a plurality of Boolean logic functions each associated with a state...", "performing logic minimization operation...", "identifying at least one of the plurality of Boolean logic functions having smallest number of minimized minterms", "storing minimized minterms identified...", "adding expanded minterms corresponding to minimized minterms...", "performing a second logic minimization operation on number of minterms...", "identifying at least another one Boolean logic function having smallest number of minimized minterms...", "storing minimized minterms of the identified function, etc...".

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
